

## Change NODATA value plugin

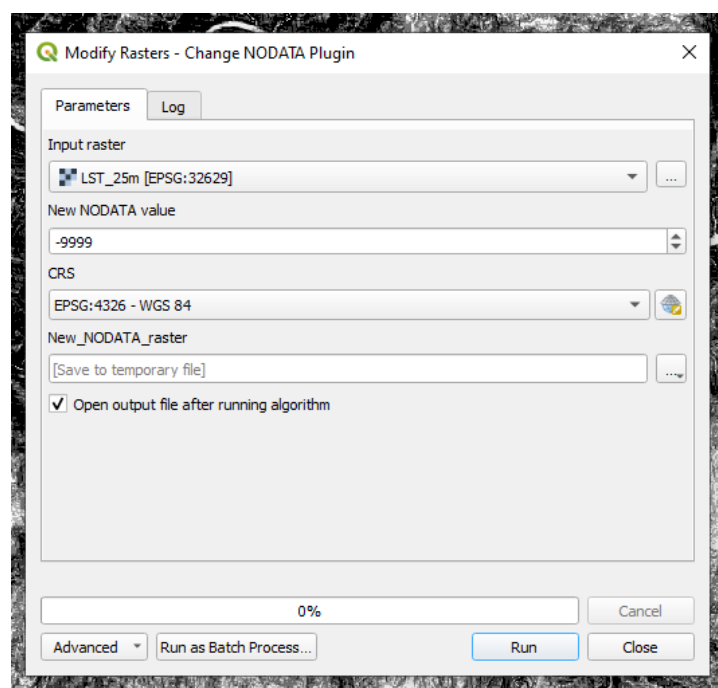

Open the plugins manager and make sure to check the plugin “Change NODATA”:

Then open the toolbox and click twice on Change NODATA Plugin:

The following window opens:

**Choose the input raster, the new NODATA value and the Coordinate Reference System (CRS) for the changed raster, and RUN the plugin.**

**For the new NODATA value, the user can choose any negative or positive number, including 0 (zero). The default value is -9999.**
